

KEN I think interventional endoscopists, they look for tools that are very logical, that they can understand, and that
BINMOELLER, they have control of, and that perform in a predictable and reproducible manner.
MD:

We don't like unknowns. We like to predict our outcomes, and we want them to be consistent. Each case, consistent outcomes.

And so if we want to forge into this new frontier of transluminal therapy, you need dedicated tools to perform EUS-guided transluminal therapy safely and efficiently. And so that's how this product was designed, to fulfill all of those features that I think we look for and we like. So the AXIOS access and delivery system I think beautifully fulfills that.
