

BroadcastMed | What can I expect when I visit the nutritionist?

NOEL A. For the first time, what they're going to go through is a detailed nutrition assessment. So I'm going to ask them a whole bunch of different questions concerning their diet history, how they got to the point that they are at right now, the causes that led them to gain the weight, or whatever medical conditions that they have, and trying to pinpoint where we're going to have to make certain changes within their routines, and maximize their weight loss after surgery.
